PRESS RELEASE

Red Hat to Acquire IT Automation and DevOps Leader Ansible

Red Hat advances frictionless IT with simplified management for hybrid clouds, OpenStack environments and container-based services

[CONTACT RED HAT PR ▶](#) [RSS](#)

RALEIGH, N.C. — October 16, 2015 — Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced that it has signed a definitive agreement to acquire Ansible, Inc., a provider of powerful IT automation solutions designed to help enterprises move toward frictionless IT. Ansible's automation capabilities, together with Red Hat's existing management portfolio, will help users drive down the cost and complexity of deploying and managing both cloud-native and traditional applications across hybrid cloud environments. With today's announcement, Red Hat expands its leadership in hybrid cloud management, OpenStack and containers.

“Ansible is a clear leader in IT automation and DevOps, and helps Red Hat take a significant step forward in our goal of creating frictionless IT.”

RECAP SUMMIT DEVNATION 2015 - BOSTON

- 15 participants Québec
- ~100 participants Canada
- ~4 000 participants
- Meilleures présentations (+ 350 participants)
 - Jeremy Eder, D. John Shakshober, & Larry Woodman - Performance analysis & tuning of Red Hat Enterprise Linux
 - Lars Herrmann - Red Hat's container strategy
 - Ben Breard & Lennart Poettering – Demystifying systemd
 - Jeremy Eder & Scott Herold - Containers versus virtualization
 - David Caplan - Red Hat Satellite 6 roadmap & demonstration
- Devnation
 - Hack night
 - Signature de livres

LES SORTIES

- RHEL 6.7
- Satellite 6.1.3
- Openshift 3
 - RHEL Atomic Enterprise (Tech preview)
- RHEL OSP 7
- Ceph 1.3 et Gluster 3.1

Red Hat Learning Subscription

RED HAT ENTERPRISE LINUX AND OPENSTACK

- Red Hat System Administration I – II – III
- Managing Containers with Red Hat Enterprise Linux Atomic Host
- RHCE Certification Lab
- Red Hat Satellite 6 Administration
- Red Hat Server Hardening
- Red Hat Enterprise Performance Tuning
- Red Hat Openstack Administration

RED HAT JBOSS MIDDLEWARE

- Red Hat JBoss Enterprise Application Development I – II
- Red Hat JBoss Application Administration I
- Systems Management with Red Hat JBoss Operations Network
- Monitoring with Red Hat JBoss Operations Network
- Red Hat JBoss Data Virtualization Development
- Switchyard Development with Red Hat JBoss Fuse Service Works

The Red Hat workshop series is coming to a city near you!

Integration services in the cloud workshop — 3 November in Montreal

Integrating parts of a business beyond the datacenter and into the cloud is key to providing a holistic solution and increases value to the business, but this can be challenging.

The reason that solving business challenges in the cloud is so difficult is because the cloud is not just one thing. It's many diverse things: Software-as-a-Service (SaaS), Platform-as-a-Service (PaaS), and Infrastructure-as-a-Service (IaaS) models, and public, private, and hybrid deployment models. On top of these models is elasticity: dealing better with unpredictable demand for IT resources. Learn how you can build applications, integrate with other systems, orchestrate using rules and processes, and then deploy across hybrid environments.

Attend our complementary hands-on technical workshop and experience Red Hat JBoss Fuse and OpenShift by Red Hat.

Attend this 1-day workshop to:

- Learn how to develop, deploy, test, innovate, and manage integration solutions in the cloud.
- Learn how integration Platform-as-a-Service (iPaaS) connects on premise and cloud solutions, and reap the operational efficiencies that OpenShift by Red Hat brings combined with the messaging and routing/mediation/transformation of Red Hat JBoss Fuse.
- Learn how to leverage iPaaS to implement a fast and repeatable continuous delivery pipeline.
- Learn how to build and implement communication between different applications, services, and data.
- Work with hands-on labs based on real-world case studies led by experienced solution architects.
