

# Linux Performance Monitoring

Jonathan Sulman

Linux engineer at General Mills

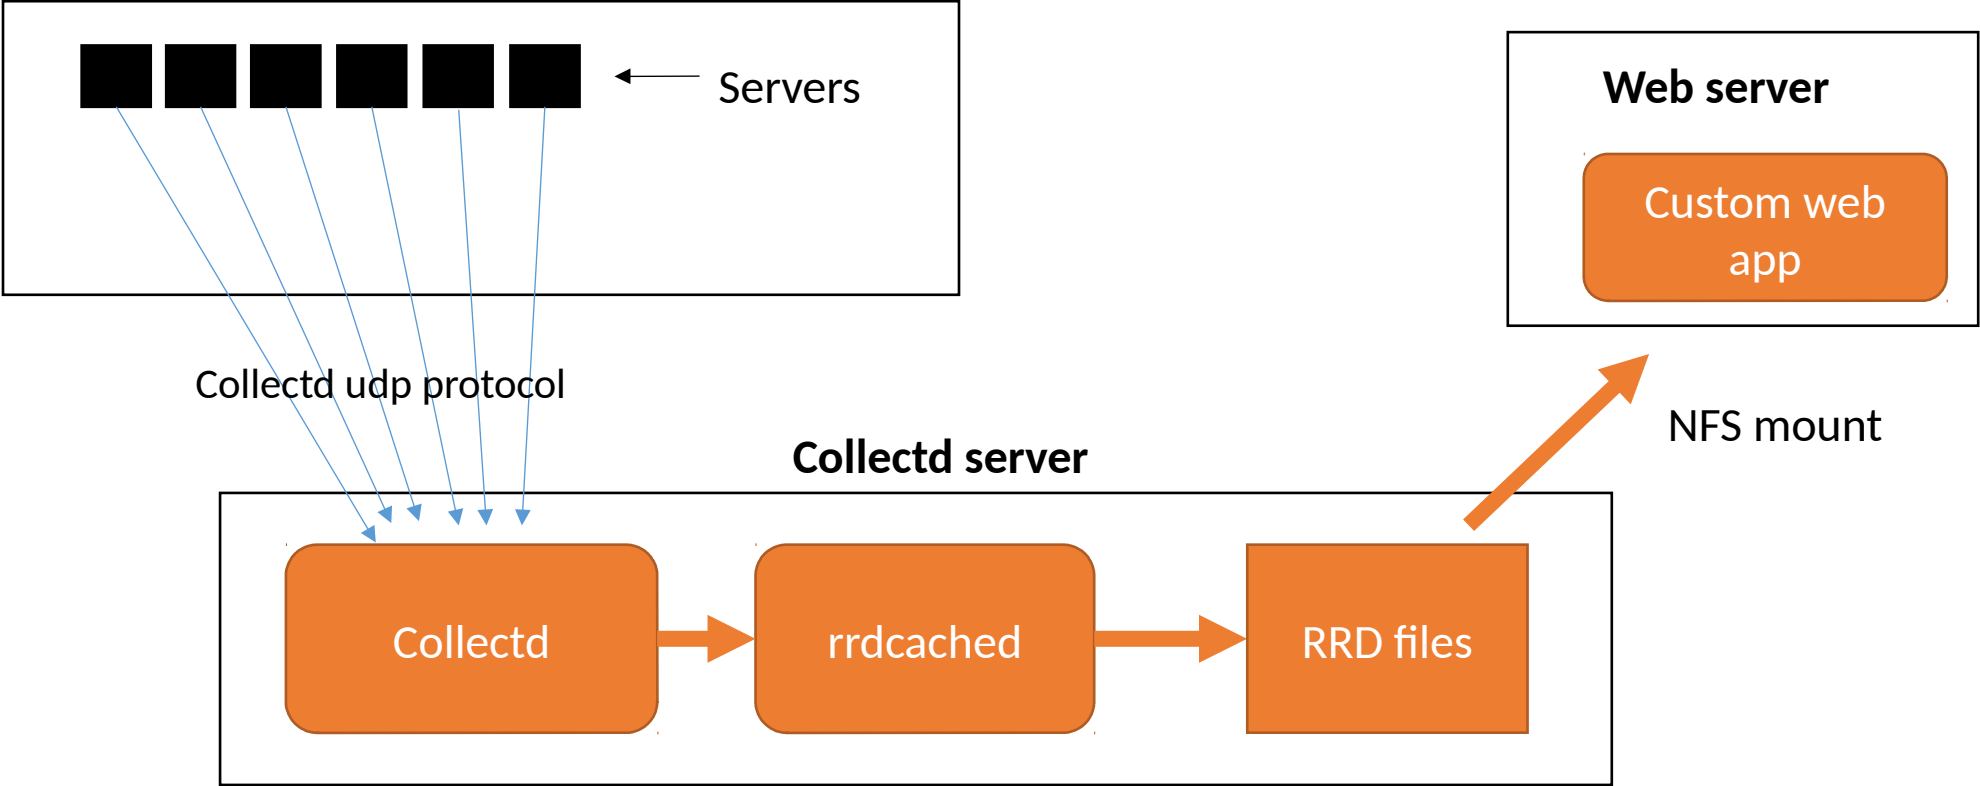

# Needs

- High resolution metrics in the short term for troubleshooting performance issues and monitoring performance
- Low resolution metrics with long retention for capacity planning and review
- User friendly dashboard
- Scale up with growing environment

# Collectd

- Open source system statistics collection agent
- Many plugins, plus “exec” plugin for custom-scripted monitors
- Out of the box support includes:
  - CPU
  - Load average
  - DF
  - Disk IO
  - Memory
  - Swap
  - Network

# Aggregation architecture: legacy

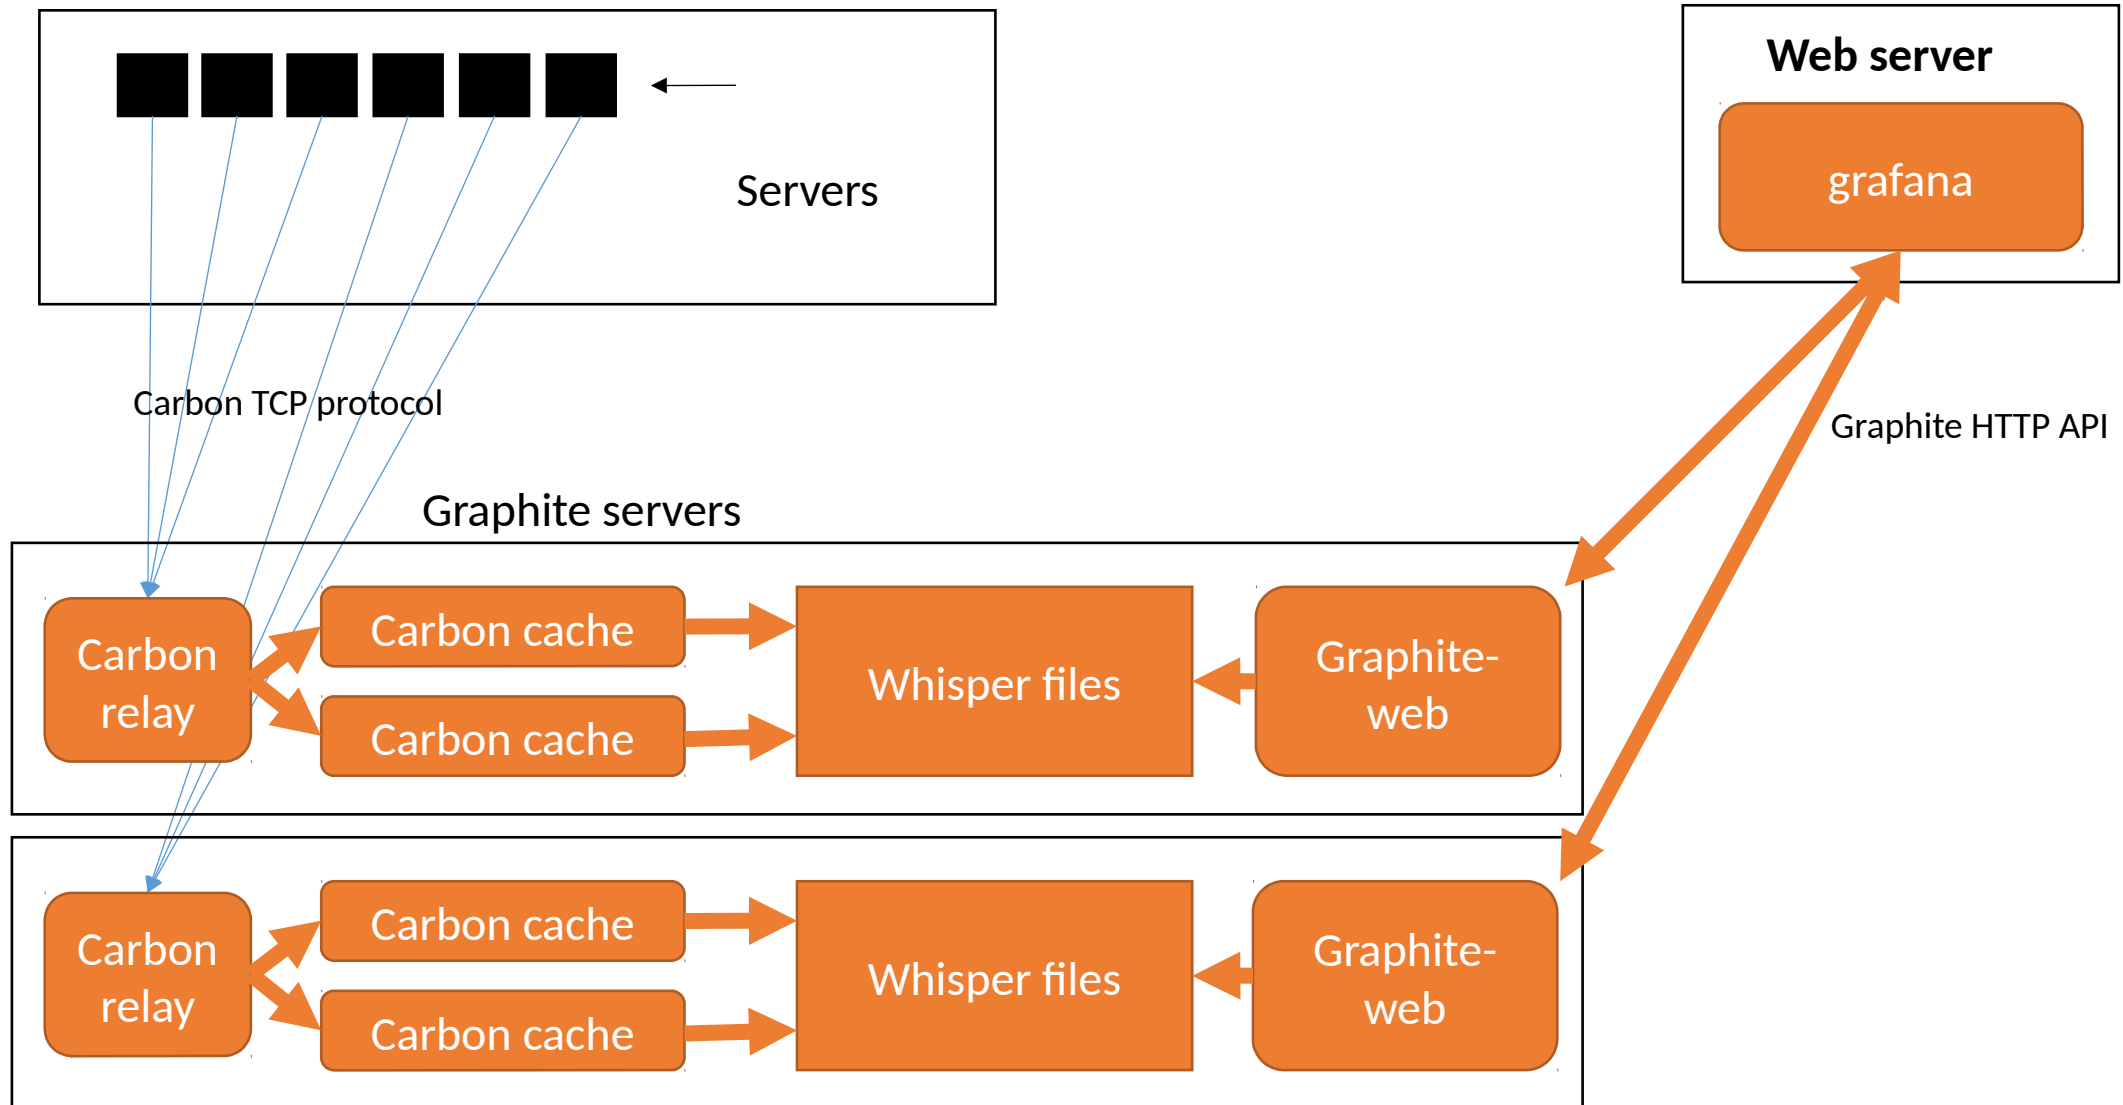

# Single-threaded collectd server couldn't keep up with incoming metrics

Yearly

Collectd dropped metrics

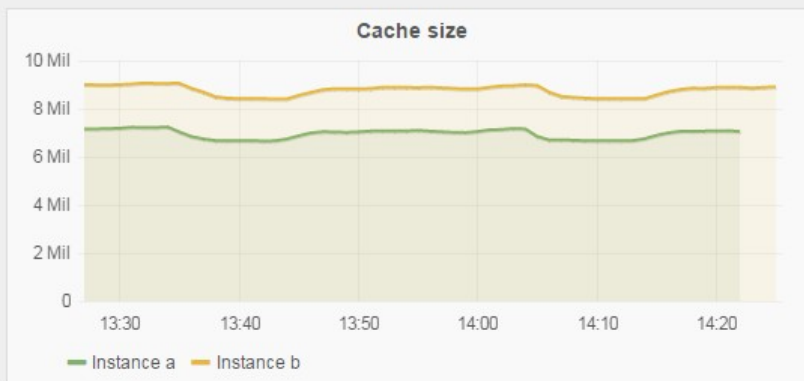

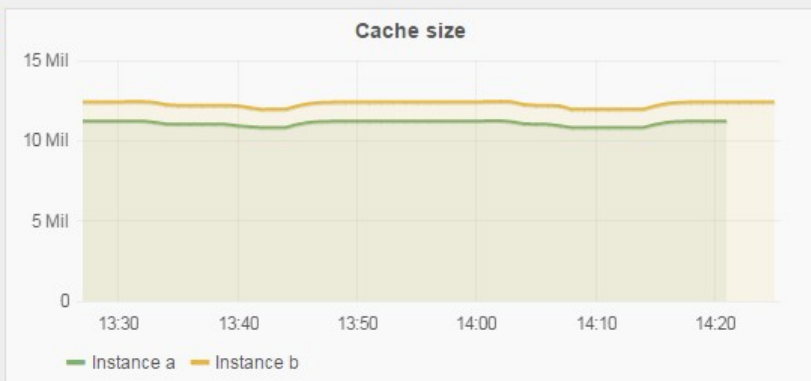

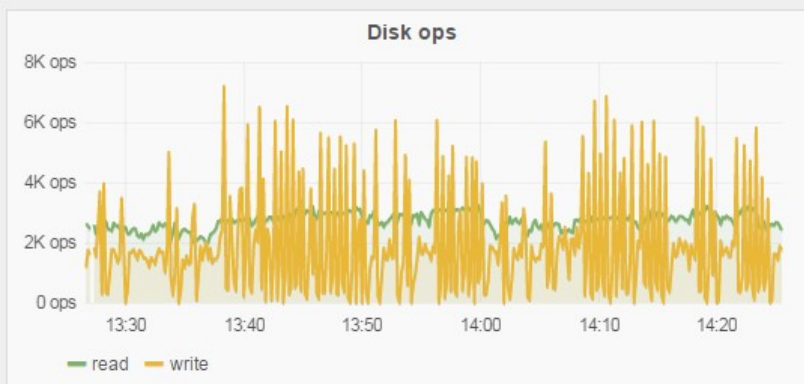

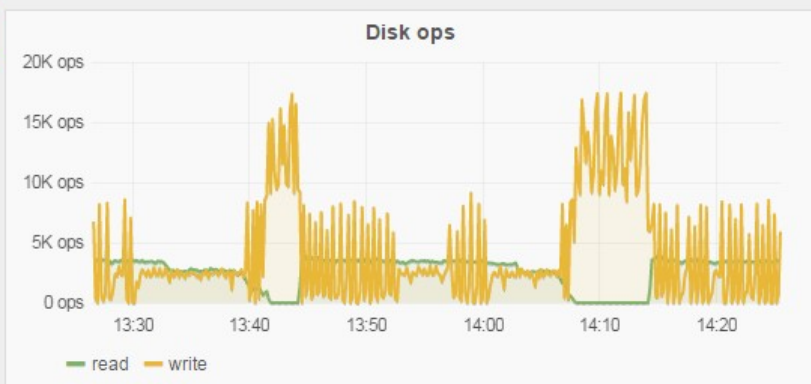

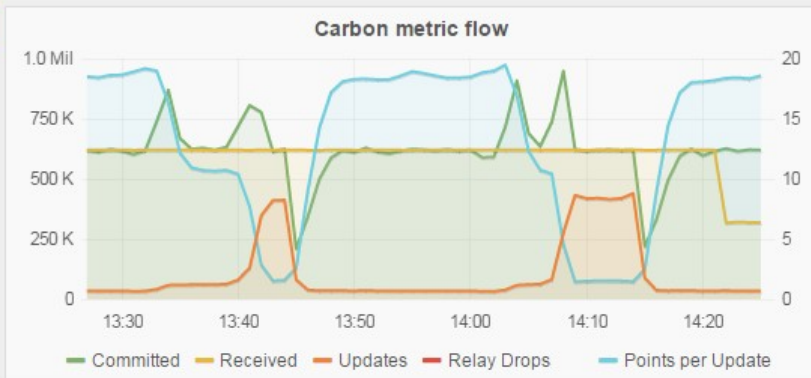

# Aggregation architecture: today
