Simple Content Access

Red Hat

Entitlements are dead...

…by the end of 2024. Long live Simple Content Access.

So what should you do about that?

Source:
https://access.redhat.com/articles/simple-content-access
https://access.redhat.com/articles/4903191

This is "just enough tagging"™ to make the reporting pretty good

System Purpose:

simple markup for non-technical

subscription attributes

This doesn't do counting.

This does all the counting

Simple content access:

use the software you've paid for without

complicated operational burdens

Subscriptions service:

provides the reporting and tracking you need to

efficiently self-govern

[Reporting transparency]

Each tool can be used individually, but they were designed to maximize efficiency by

working together to bring you the full subscription experience.

You will not get the full experience unless you use all three of these tools, together

Red Hat

Red Hat Enterprise Linux

Monitor your Red Hat Enterprise Linux usage by physical, virtual, and public cloud sockets. Learn more about Subscriptions reporting 🔗

Red Hat

Build and Manage RHEL with hosted services

Red Hat

A (brief) history of Red Hat Insights

Originally launched to proactively find potential issues with RHEL

Expanded with security and operational analytics and across the portfolio to Ansible and OpenShift

And then...

Red Hat

Red Hat Enterprise Linux

"From a single web console, systems administrators of all skill levels can detect, analyze and patch potential issues and push standardized operating systems to whatever footprint operations require, simplifying the complexities of Linux management without limiting the ability to innovate."
